On 08 December 2017 the regular meeting of the RS RAS Academic Board took place.

The issues of agenda were as following:

1. The most important results of 2017 in the framework of State task execution.
2. Approval of the Plan of Research Work for 2018-2020

As a result of the voting on the first question was approved by two of the most important results obtained in the course of research themes elaboration: "Study of modern movements of the Earth's crust in Central Asia, using the tools of space geodesy" (No. 0155-2014-0002) and "Development of hardware and software and basics of the technology of electromagnetic monitoring of geodynamic processes in seismically active zones and the assessment of their risks" (No. 0155-2014-0004).

On the second issue, the discussion of RS RAS Plan of research work for 2018-2020 took place. For each of the four themes included in State Task, the content of works planned for execution in 2018-2020, as well as anticipated results for the period were determined.
