On the June 3, 2016, the regular scientific workshop in the Research Station RAS in Bishkek city was held. Within the framework of workshop the lecture “**Geology around us (about the geological processes observed within the territory of the Research Station and its surroundings)**” the staff scientist of the Laboratory of Integrated Studies of Geodynamical Processes in Geophysical Fields (LIS) **Vinera**

Muhamadeeva
delivered a lecture.

The main forms of exogenic processes actually happening in the territory of Research station and its close environment were examined, namely:

- physical and chemical rotting;
- effects of surface waters (rainwash, work of temporary streams and rivers on the example of Alamedin river and its feeders; gully erosion on the left bank of Alamedin river);
- work of subsoil waters (suffusion);
- gravitational processes (landslides, landfalls).

Secretary of the workshop

Olga Zabinyakova
